HOBACK HARDWARE

Standard sizes:
22" Display - Portrait and Landscape

Compact design for empowered digital-first consumer interactions such as self-order or self-check-in combine with a minimalist footprint to make the Hoback one of REDYREF's most flexible kiosk solutions.

When space is at a premium but can't come at the cost of functionality, the Hoback digital kiosk is an ideal choice for even the smallest areas, from hotel beverage and snack centers, to corporate commissaries.

With its minimal footprint, the Hoback was designed to offer the power and performance of a much larger kiosk but in a compact form factor by utilizing either a touchscreen tablet computer or a standard touchscreen display. It is available in freestanding, counter mount and wall mount configurations, making it adaptable across many environments.

Excellent external brandability is another hallmark of the Hoback, allowing organizations to make bold visual statements even in compact spaces. But where the Hoback really shines is its flexibility, the result of a wide range of available component integrations.

Whether used for visitor management as a virtual receptionist, or integrated with EMV or NFC systems for self-pay applications like QSR self-ordering, the Hoback's human-scale design lends itself to easy and intuitive end-user interactions.
